Failure
window of length T_R
Wave height H_s
hourly hindcast
limit $OP_{WF} = \alpha \times OP_{LIM}$
restored
Production
of the stopped wells
Lost production
downtime × stopped wells × well rate
time
Intervention
vessel on hire
Mobilization
Waiting on weather
Repair (lifts)
T^{mob}
T^{wait}
T^{rep}
Downtime $D = T^{mob} + T^{wait} + T^{rep}$
repair cost = vessel day rate × D + spare part
